

THELIN COMPANY, INC.
MANUFACTURER OF PELLETT, GAS, & WOOD STOVES

Parlor 3000
Direct Vent Gas Heater

Simple through-the-wall venting makes the Parlor Direct Vent ideal for installing in existing homes where vertical venting might not be possible. Approved for mobile home and sleeping rooms, the Parlor Direct Vent comes equipped with a variable-speed circulator fan & log set at no extra cost.

DEFINITION: "Direct Vent" means that combustion air enters through the same pipe through which the exhaust exits. Double wall pipe construction allows for combustion air and exhaust gas to pass each other without contamination. Minimum vertical rise is 24". Then, termination can occur directly out the wall.

SPECIFICATIONS	PERFORMANCE	CLEARANCES
Height: 45"	High: 31,000 BTU (Natural Gas)	Back wall: 4"
Weight: 185 lbs	Low: 18,600 BTU (Natural Gas)	Side wall: 10"
Diameter: 20"	Efficiency: 76%	Corner wall: 8"
Venting: 6 5/8" Simpson Duravent direct vent required	High: 28,000 BTU (Propane)	Alcove approved
Footprint: 20" square	Low: 16,800 BTU (Propane)	50" wide
	Efficiency: 75%	32" deep
